Overview

The 19th International conference on Computing and Information Technology takes place at an extraordinary time for digital innovation - a time when, as renowned disruptive anthropologist Brian Solis has said: "technology and society are evolving faster than businesses can naturally adapt". Fact. There are eras when advancing technology and changing organizations transform not just one production sector, but the entire global economy and societies on which they rest. Such periods are highly infrequent, but, we are undoubtedly in the midst of one now; one in which information technology is the dominant source of economic development – the cerebral muscle behind all-purpose tools to manipulate, organize, transmit, and store information in digital form. The capabilities created to process and distribute digital data multiply the scale and speed with which thought and information can be applied. This year's conference spotlights the possibilities and challenges, as well as the social and economic upheavals likely to unfold as biometrics, affective computing, augmented reality and other transformative technologies see the physical and digital worlds converge.
